

EEG:

- Your doctor has ordered an EEG. EEG is most commonly performed for evaluation of seizures, and other condition that might affect consciousness.
- EEG is a test of brain's electrical activity. During the test small wires are connected to the head and the electrical activity is measures. The test is painless.
- On the day of the test, wash you hair and dry thoroughly. Do not apply any gel, oil or lotion to the hair.
- Physician will read the result and results will be forwarded to your referring doctor or to you. Please note that the test results may take few days to finalize.
